Internship Project Assignment

Domain: Web Development Intern

Project Title: SmartBiz – All-in-One Business Management & Marketplace Platform

1■■ WHAT is this project?

SmartBiz is a full-stack web application that allows small businesses to:
• Create their own online business profile
• Add services or products
• Manage bookings or orders
• Receive customer inquiries
• View analytics in a dashboard
• Be listed in a public marketplace where customers can search businesses

It is a mini version of platforms like UrbanClap + Shopify + Google Business Profile combined in one system.

This project includes:
Backend (API & database)
Frontend (UI/UX)
Authentication system
Dashboard
Deployment
Testing
Documentation
Demo presentation

2■■ WHY are we building this project?

Real-World Problem:
Many small businesses do not have proper online presence, cannot afford expensive software, and use multiple tools for management.

This project creates a single platform to manage everything.

Why this is important for Intern:
• Demonstrates full-stack development skills
• Database design knowledge
• API creation

• Authentication implementation
• Deployment skills
• Testing & CI/CD knowledge
• Real-world product thinking

3■■ HOW will you build this project?

PHASE 1 – Planning & Setup
• Define features clearly
• Design database structure (Users, Businesses, Services, Bookings, Orders, Reviews)
• Create GitHub repository with README
• Choose free tech stack

PHASE 2 – Backend Development
• Use FastAPI / Django REST / Node.js
• Implement JWT Authentication
• Business APIs
• Booking APIs
• Reviews system
• Dashboard APIs
• Search functionality
• Use Supabase or MongoDB Atlas (free)

PHASE 3 – Frontend Development
• Use Next.js (recommended) / React / Vue
• Connect UI with backend APIs

PHASE 4 – Google Maps Integration (Manual – Free)
• Collect business details manually and add to system

PHASE 5 – Testing
• Minimum 10 backend tests
• Error handling & validation
• GitHub Actions (basic CI)

PHASE 6 – Deployment (Free)
• Frontend → Vercel
• Backend → Render or Supabase
• Database → Supabase free tier
• Or provide local setup instructions & demo video

4■■ Required Deliverables

• Public GitHub repository
• Proper README (Project explanation, Tech stack, Setup instructions)
• Live deployed link (if possible)
• Local run instructions (mandatory)

• Demo video (1–2 minutes)
• LinkedIn post with project explanation & links

5■■ Minimum Working Flow (Must Work)

• User signup/login
• Create business profile
• Add services
• Book a service
• View dashboard analytics
• Search businesses

If these 6 features work properly → project is successful.

6■■ Important Rules

• 100% free tools only
• No paid hosting or APIs
• Clean & structured code
• No copied templates without modification
• No secret keys in repository

7■■ What Makes This Project Advanced?

• Authentication system
• Role-based access control
• Multi-tenant architecture
• Real-world database design
• API integration
• Dashboard analytics
• Deployment process
• CI/CD basics
• Testing implementation

Equivalent to a junior-level production system.

Final Note for Interns

Intern can follow their own steps and tools to develop this project.
